

Starting SMARTBoard Version 10

SMART 10 is very different in the management of the program, but the SMART Notebook software is very similar. To use SMART 10 in the KSD environment, users need to know a few icons to get started.

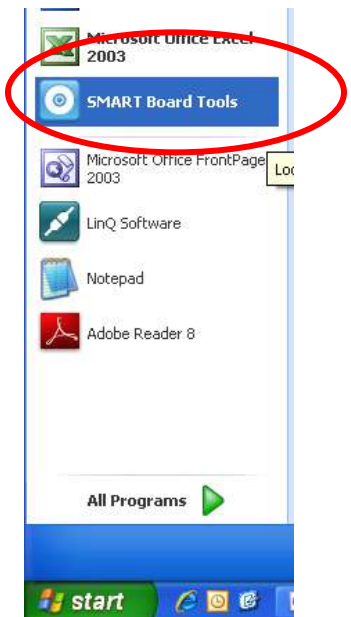

Start SMART Notebook Software

- Double click on the **Notebook Software 10** desktop icon. This will allow you to use the SMARTBoard with this program only.

Start SMART Software (ie, use SMARTBoard with Internet Explorer, Desktop, etc.):

- Go to the **Start** menu in the lower left corner of your screen.
- Directly above the word **Start**, select the option for **SMART Board Tools**.
- This puts the correct SMART icon into the computer system tray. *When this icon is visible, every part of the SMART software should be fully operational.*

View the Floating Toolbar

- Right click on the icon in the system tray and choose **Show Floating Tools**. The are hidden using the same process.
